Abstract: RadNet is a national network of stations collecting sampling media that include air, precipitation, and drinking water. Samples are sent to EPA's National Analytical Radiation Environmental Lab (NAREL) in Montgomery, Alabama, where they are analyzed for radioactivity. RadNet provides emergency response/homeland security and ambient monitoring information on levels of environmental radiation across the nation. All stations, usually operated by state and local personnel, participate in RadNet voluntarily. Station operators complete information forms that accompany the samples. The forms request information pertaining to sample type, sample location, start and stop date and times for sampling, length of sampling period, and volume represented. Data from RadNet are made available regularly on the Agency website – <https://www.epa.gov/radnet>.

Form Numbers: 5900-23, 5900-24, 5900-27, 5900-29

Respondents/affected entities: Primarily State and Local Officials

Respondent's obligation to respond: Voluntary

Estimated number of respondents: 237 (total).

Frequency of response: Biweekly, monthly, quarterly

Total estimated burden: 3,722 hours (per year). Burden is defined at 5 CFR 1320.03(b)

Total estimated cost: \$2,510,235 (per year), includes \$2,363,476 annualized capital or operation & maintenance costs.

Changes in the Estimates: There is a decrease of 5 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. This decrease shows the program is in maturity and is expected to operate with minimal change.
